Geometry: Axial strain cylinder in weather sealed case, with raised end load bearing faces and hole right through. For use in compression or in fail-safe tensile applications on a wide range of OEM or end-user applications.

The F313 is ideally suited to engineering force measurements. It is designed for easy installation, usually between two flat faces bearing on its loading rings, either unattached or with retaining spigots positioned in the centre hole. Alternatively tensile load transfer can be achieved via a tie rod assembly through the centre hole. In this way the loadcell can indirectly measure tensile loads in a "fail-safe" mode. We are happy to design variants of this loadcell to meet your specific requirements. Versions can be manufactured for fully compensated operation up to +250°C. Please consult our engineering department.

Code	Description
F313CFR0K0	Compression, IP65, unrationalised
F313CFR0KN	Compression, IP65, rationalised
Change the K to an H for the 1 tonne range.	

Structural Stiffness - Nominal

Range (kN)	Stiffness (N/m)
10	1.1 x 10 ⁹
20	2.2 x 10 ⁹
40	4.4 x 10 ⁹
80	8.8 x 10 ⁹
100	7.7 x 10 ⁹
120	7.1 x 10 ⁹
160	8.0 x 10 ⁹
200	1.0 x 10 ¹⁰

Notes

- AL = Applied load.
- RL = Rated load.
- Temperature coefficients apply over the compensated range.
- The load must be applied directly through the central loading axis.

Connections

For ranges up to 4 tonnef the loadcell is fitted with 2 metres of PVC insulated 4 core screened cable type 7-1-4C. Ranges above 4 tonnef are fitted with 7-2-4C cable.

Excitation + = Red, Excitation - = Blue, Signal + = Yellow, Signal - = Green, Screen = Orange.

The screen is not connected to the loadcell body.

When this loadcell is rationalised the resistors are housed in a capsule located in the loadcell cable 100mm from the free end. Capsule dimensions are Ø10mm by 57mm.
